🎙️ Michael的早听晚读 · Vol.02

晚读讲义 · 本期主题：蜜蜂踢足球 ⚽🐝 与会做梦的章鱼 🐙 · 英文 503 词 · 音频 4分35秒

📖 Part 1：双语精读对照

以下为本期男主播朗读的全部英文原文（共 6 节：Section 1–6），逐节配中文翻译。

1 Section 1

Welcome back to Michael's Morning Listening! Today we have two tiny geniuses for you: a bee that learned to play soccer, and an octopus that might be dreaming in color. Let's jump in!

欢迎回到 Michael 的早听晚读！今天有两个小天才要介绍给你：一只学会了踢足球的蜜蜂，和一只可能会做彩色梦的章鱼。让我们开始吧！

2 Section 2

Can you imagine a bee playing soccer? Scientists did more than imagine — they actually trained **bumblebees**（大黄蜂） to push a tiny ball into a tiny goal!

你能想象蜜蜂踢足球吗？科学家不只停留在想象——他们真的训练大黄蜂把一颗小球推进小球门！

Here is how it worked. The scientists built a mini soccer field with a little ball and a small goal. When a bee pushed the ball into the goal — GOAL! — it got a sweet drink of sugar water as a prize. Bees love sweet things, so they learned fast.

过程是这样的。科学家们搭建了一个迷你足球场，放了一颗小球和一个小球门。当蜜蜂把球推进球门——进球！——它就能喝到一杯甜甜的糖水作为奖励。蜜蜂最爱甜食，所以它们学得飞快。

But here is the amazing part. The bees did not just learn by trying again and again. They learned by watching! A "teacher bee" showed them how to push the ball, and the student bees copied it. Even cooler, some bees found a shorter, smarter path to the goal than the teacher showed them. They were not just copying — they were thinking!

但最神奇的部分在这里。蜜蜂们不只是靠一次次尝试学会的，它们是靠“看”学会的！一只“老师蜜蜂”先示范怎么推球，学生蜜蜂们跟着模仿。更酷的是，有些蜜蜂找到了一条比老师示范的更短、更聪明的进球路线。它们不只是在模仿——它们在思考！

The most surprising moment came later. When the scientists tested the bees the next day, the bees still remembered how to score — they had not forgotten overnight! For a brain smaller than a grain of rice, that is like remembering a whole dance routine after seeing it only once.

最惊人的时刻还在后面。第二天科学家再测试这些蜜蜂时，它们居然还记得怎么进球——一夜过去完全没忘！对一颗比米粒还小的大脑来说，这就像只看了一遍就记住了一整套舞蹈动作。

This little experiment tells us something big: even tiny insect brains can learn new tricks and pass them on. Who knows what else small brains can do?

这个小实验告诉我们一个大道理：哪怕小小的昆虫大脑，也能学会新本领，还能传给同伴。谁知道小小的大脑还能做到什么呢？

3 Section 3

> Now let's dive under the sea and meet the octopus — the eight-armed genius of the ocean.

现在让我们潜入海底，认识一下章鱼——海洋里的八臂天才。

> When you sleep, your eyes move quickly — scientists call this dream sleep. Octopuses have something similar! When an octopus falls into deep sleep, its skin starts to flash and change: **stripes**（条纹）, spots, waves of color, all dancing across its body. It looks like it is watching a movie behind closed eyes.

你睡觉时，眼球会快速转动——科学家把这叫作“梦睡眠”。章鱼也有类似的现象！当章鱼进入深睡，它的皮肤开始闪烁变幻：条纹、斑点、一波波颜色，在它身上跳起舞来。看起来就像它闭着眼睛在看电影。

> Scientists watched sleeping octopuses very carefully and recorded their brain activity too. During these colorful moments, the octopus's brain looks surprisingly awake — almost as if it is reliving the day, maybe practicing how to catch a crab or escape from danger, all inside a dream.

科学家非常仔细地观察了熟睡的章鱼，还记录了它们的大脑活动。在这些色彩斑斓的时刻，章鱼的大脑看起来惊人地“清醒”——仿佛它正在重温白天发生的事，也许在梦里练习怎么抓螃蟹、怎么躲避危险。

> And here is a fun thought: octopuses have three hearts and blue blood. With a body that strange, who knows what their dreams look like? Maybe they dream in eight directions at once!

再告诉你一个有趣的冷知识：章鱼有三颗心脏，流的是蓝色的血。身体都这么奇特了，谁知道它的梦长什么样？也许它同时朝八个方向做梦呢！

> So the next time you see an octopus nap at the aquarium（水族馆）, take a good look at its skin. You might be watching someone else's dream!

所以下次你在水族馆看到章鱼打盹，好好看看它的皮肤吧。你看到的，可能正是别人的梦境！

4 Section 4

> Here's today's joke: Why do bees have sticky hair? ... Because they use **honeycombs**（蜂巢）! Get it? A comb is what you use for your hair, and a **honeycomb** is where bees keep their honey!

今日笑话：为什么蜜蜂的头发黏糊糊的？……因为它们用 honeycomb（蜂巢）！get 到了吗？comb 是梳子，honeycomb 是蜜蜂存蜜的蜂巢！

5 Section 5

> That brings us to the end of today's show! Before you go, here's a question: If you could teach any animal to play any sport, which animal and which sport would you choose — and why?

今天的节目就到这里！走之前留一个问题：如果你能教会任何一种动物玩任何一种运动，你会选什么动物、什么运动？为什么？

6 Section 6

> Have a wonderful day, and see you tomorrow morning!

祝你有美好的一天，明天早上见！

📚 Part 2：核心词汇

bumblebee /ˈbʌmblbiː/ (n.) 大黄蜂

趣味词汇

*Example: The scientists trained **bumblebees** to push a tiny ball into a tiny goal.*

stripe /straɪp/ (n.) 条纹

Example: Stripes, spots, waves of color, all dancing across its body.

relive /ˌriːˈlɪv/ (v.) 重新体验；重温

*Example: It is almost as if it is **reliving** the day, inside a dream.*

honeycomb /ˈhʌnikəʊm/ (n.) 蜂巢

趣味词汇 双关语

*Example: Why do bees have sticky hair? Because they use **honeycombs**!*

✏️ Part 3：阅读理解自测

A. 标题配对（Match the headings）

Part 1 全文共分 6 节（Section 1–6），请为每一节选择最合适的标题：

1. Section 1 → _____
2. Section 2 → _____
3. Section 3 → _____
4. Section 4 → _____
5. Section 5 → _____
6. Section 6 → _____

Headings:

A. A Honeycomb Pun
B. Two Little Geniuses Today
C. See You Tomorrow Morning
D. Bee Soccer School: Score a Goal, Get Sugar Water
E. The Octopus's Dream: Movies on Its Skin
F. Teach an Animal a Sport

B. 单项选择（Single Choice）

1. After a bee pushes the ball into the goal, what does it get as a prize?
   A. Nectar
   B. Sugar water
   C. Pollen
   D. Nothing
2. How did the bees mainly learn to push the ball?
   A. By trying again and again by themselves

B. By watching a "teacher bee" show them
C. The scientists taught them by hand
D. They were born knowing how

3. When an octopus sleeps deeply, its skin changes color. What do scientists think is the most likely reason?
   A. It feels afraid
   B. It might be dreaming
   C. The sea water temperature changed
   D. It is angry

4. Which sentence about the octopus is TRUE?
   A. An octopus has only one heart
   B. An octopus has red blood
   C. An octopus has three hearts and blue blood
   D. An octopus never sleeps

🔬 Part 4：长难句深度拆解与练习

经典原句：

During these colorful moments, the octopus's brain looks surprisingly awake **— almost as if it is reliving the day**, **maybe practicing how to catch a crab** or escape from danger, all inside a dream.

保姆级结构拆解：

- 主句：the octopus's brain looks surprisingly awake（章鱼的大脑看起来惊人地清醒）。look 是系动词，后面跟形容词 awake 作表语。
- almost as if it is reliving the day 是 **as if 引导的方式状语从句**，表示"仿佛在重温白天"。注意这里用的是 is reliving（陈述语气），因为说的是"很可能正在发生的事"，不是纯假想。
- maybe practicing how to catch a crab 中，practicing... 是**现在分词作伴随状语**，补充说明"重温"的内容；how to catch 是**疑问词 + 不定式**作 practicing 的宾语，相当于 how it can catch。
- 整句逻辑链：**时间背景（在这些彩色时刻）→ 主句（大脑很清醒）→ 仿佛在干什么（重温白天）→ 具体练什么（抓螃蟹）**。一句话层层递进，是科普英语描写"科学家推测"的经典句型。

句型练习（练的就是上面拆解的三个知识点）

A. 系动词 look + 形容词：选出作表语的形容词

1. After the long run, the little robot looks surprisingly _____.
2. In the moonlight, the quiet lake looks almost _____.

B. as if 方式从句：说“很可能正在发生的事”用陈述语气

1. The fish moves its fins slowly, almost as if it _____ through clear water.
2. The old clock ticks loudly, almost as if it _____ to everyone in the room.

C. 现在分词伴随状语 + how to...：补全句子

1. The young seal played in the water, _____ out of the waves.

2. The monkey watched the keeper, _____ the box.

D. 翻译练习：把这两句译成中文（不提供译文，自己试着写）

1. In the soft light, the baby panda looks surprisingly calm — almost as if it is listening to a story, practicing how to roll over in the grass.
2. At night, the little owl looks wide awake — almost as if it is reading the moon, learning how to fly from tree to tree.

✅ Part 5：答案与解析

A. Headings:
1 → B (Two Little Geniuses Today)
2 → D (Bee Soccer School: Score a Goal, Get Sugar Water)
3 → E (The Octopus's Dream: Movies on Its Skin)
4 → A (A Honeycomb Pun)
5 → F (Teach an Animal a Sport)
6 → C (See You Tomorrow Morning)

B. Single Choice:
1 → **B**. The text says: "it got a sweet drink of sugar water as a prize."
2 → **B**. The text says: "They learned by watching! A "teacher bee" showed them how to push the ball."
3 → **B**. The text says the octopus looks "almost as if it is reliving the day... all inside a dream." Watch out: this is the scientists' guess — the text uses "almost as if".
4 → **C**. The text says: "octopuses have three hearts and blue blood."

C. Part 4 Practice:
A. 1. tired 2. alive
B. 1. is flying 2. is talking
C. 1. practicing how to jump 2. learning how to open
D. Your own translations — there is no key for this part. Read your Chinese aloud and check that it sounds natural.

🌟 全部答对就是今日 MVP！
明天早上同一时间，继续《Michael的早听晚读》～
